

### Good medicine and good health care demand good information.

*Methods of Information in Medicine* is stressing, for more than 50 years, the methodology and scientific fundamentals of organizing, representing and analyzing data, information and knowledge in biomedicine and health care. It publishes original papers, reviews, reports, opinion papers, and editorials in medical informatics/health informatics and related disciplines such as medical biometry and bioinformatics.

Since the journal's foundation in 1962, progress in information processing methodology and in information and communication technology has significantly changed our societies. Medicine and health care have taken full advantage of this progress. *Methods of Information in Medicine* continues to publish papers in the whole range of processing data, information and knowledge in medicine and health care, including research in traditional as well as in new areas of this expanding field. It includes topics such as health information systems and patient records; diagnosis and therapy in health care; biomedical data, signal, and image interpretation and ambient assisted living; clinical bioinformatics; clinical data analysis and statistical studies; decision support, knowledge management and representation; simulation and modeling; education and training.

*Methods of Information in Medicine* is an official journal of the International Medical Informatics Association (IMIA, [www.IMIA.org](http://www.IMIA.org)) and of the European Federation of Medical Informatics (EFMI, [www.EFMI.org](http://www.EFMI.org)).

### General Remarks

*Methods of Information in Medicine* publishes original papers. It does not publish material that has already appeared elsewhere. Submitted manuscripts should not have been published in, nor have been submitted to any other journal. We do accept some papers that have been published as abstracts or appeared in a language other than English, e.g. selected, extended high-quality papers of (inter-) national conferences. Apart from manuscripts, Letters to the Editor are also welcome. It is at the discretion of the editor whether such letters will be published in the journal.

This journal follows the guidelines of the International Committee of Medical Journal Editors (<http://www.icmje.org/index.html>), the Committee on Publication Ethics (<http://www.publicationethics.org.uk>), and the Proposals for Safeguarding Good Scientific Practice of the German Research Association ([http://www.dfg.de/aktuelles\\_presse/reden\\_stellungnahmen/download/self\\_regulation\\_98.pdf](http://www.dfg.de/aktuelles_presse/reden_stellungnahmen/download/self_regulation_98.pdf)). The authors should especially be aware of the following relevant issues in these guidelines:

- **Authorship.** All authors should have made 1) substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data; 2) drafting the article or revising it critically for important intellectual content; and 3) final approval of the version to be published.
- **Conflicts of Interest.** All authors must disclose any financial and personal relationships with other people or organizations that could inappropriately influence (bias) their actions.
- **Protection of Human Subjects and Animals in Research.** Authors who submit a manuscript on research involving human subjects should indicate in the manuscript whether the procedures fol-

lowed were in compliance with the ethical standards of the responsible committee on human experimentation (institutional and national) and with the World Medical Association Declaration of Helsinki on Ethical Principles for Medical Research Involving Human Subjects (<http://www.wma.net/e/policy/pdf/17c.pdf>).

### Manuscript Preparation

Authors are kindly requested to carefully follow all instructions on how to write a paper. In cases where the instructions are not followed, the paper will be returned immediately with a request for changes, and the editorial review process will only start when the paper has been resubmitted in the correct style.

Authors are responsible for obtaining permission to reproduce any copyrighted material and this permission should be acknowledged in the paper.

Authors should not use the names of patients. Patients should not be recognizable from photographs unless their written permission has first been obtained. This permission should be acknowledged in the paper.

Contributions are submitted in the English language only. Use 'American English' instead of 'British English', unless you are from a British English speaking country. Use a spell checker and consult, if necessary, a native English speaker before submitting your article.

Pages should be numbered consecutively beginning with the title page. Where appropriate, the paper should be organized into the following sections: Summary, Introduction, Objectives, Methods, Results, Discussion, Conclusions, Acknowledgments, and References.

In general the manuscript text (excluding summary, references, figures, and tables) should not exceed 5000 words.

#### Title Page

The first page of the article should contain: 1) a concise but informative title of the paper; 2) initial(s) and last name of each author, to be followed by their institutional affiliation(s); 3) the name and address of the author (plus telephone, fax, e-mail address) to whom correspondence and galley proofs should be sent.

#### Summary and Keywords

The Summary should not exceed 250 words (or 1600 characters including spaces). Authors are requested to write a structured summary, adhering to the following headings: Background (optional), Objectives, Methods, Results, Conclusions. The Summary should be typed on a separate page. At the end of the Summary, the contents of the paper should be specified by, at most, five keywords. We recommend using MeSH keywords.

#### Text

We recommend double spacing and twelve-point type Times New Roman.

Apart from the main headings, such as Introduction and Methods, subheadings should be used where appropriate and may be numbered. The sections Methods and Results should be presented in logical order. Credit should be given to the existing literature. Save your manuscript in either Microsoft Word format (.doc) or Rich Text Format (.rtf).

### Figures and Tables

Tables and figures are not revised and should therefore be of high quality and suitable for reproduction. Type size should be chosen so that any reduction in the width of the columns will not affect legibility. Use a uniform type size, and avoid borders around tables and figures.

Each table should be typed double-spaced. The tables should be numbered consecutively. A self-explanatory and concise legend should appear at the top of the table. Do not save your table as an image file or insert a table into your manuscript text document as an image.

All figures should be numbered consecutively and referred to in the text using Arabic numbers (e.g. 'Fig. 3') All figures will have an appropriate legend (typed double-spaced).

In case of acceptance, figures should be sent to the editorial office as digital documents or as original drawings in black ink, or as high-contrast, sharp photographs on glossy paper. For color illustrations € 350.00 per page will be charged to the author for the first figure. If further color figures fit on the same page, an additional € 75.00 will be charged per figure.

Do not save graphics in .DOC, but in .TIF or .EPS format with a minimum resolution of 800 dpi (line drawings) or 300 dpi (photos, screen pictures). It is important to save your figures with a clear, descriptive file name such as "Figure1.tif". Good laser printouts of line drawings may be used for scanning, but color, telefax and matrix printer printouts are unsuitable.

### Formulas

Special care should be taken with the presentation of formulas. In order to save formulas into your document in a manner that will ensure their accurate appearance in the proof generated by the system, create the formulas as text. Please make sure that your printer does not distort the clarity of formulas. Check that any 'dots', 'dashes', 'minus signs', etc. are legible and not likely to be misinterpreted.

### References

In the text number the references consecutively in the order in which they first appear, using Arabic numerals. Use the style, which is based on the formats used by the US National Library of Medicine in MEDLINE (sometimes called the 'Vancouver style'). For details see the guidelines from the International Committee of Medical Journal Editors ([http://www.nlm.nih.gov/bsd/uniform\\_requirements.html](http://www.nlm.nih.gov/bsd/uniform_requirements.html)). Examples:

1. Lindberg DA, Siegel ER. On assessing the impact of medical information: does MEDLINE make a difference? *Methods Inf Med* 1991; 30: 239–240.
2. van Bommel JH, Musen M, editors. *Handbook of Medical Informatics*. Heidelberg: Springer; 1997.

### Acknowledgments

Scientific advice, technical assistance, and credit for financial support and materials may be grouped in a section headed 'Acknowledgment(s)' that will appear at the end of the text (immediately after the Conclusions section).

### Manuscript Submission

All submissions must be entered online at the URL: <http://mc.manuscriptcentral.com/methods>.

Full instructions and support are available on the manuscript submission site. A user ID and password can be obtained on the first visit.

Please check carefully the proof that will be generated by the Manuscript Central system, especially all Greek letters and other special characters. The version in the proof is the version seen by the editor and reviewers. If you have any difficulties submitting your manuscript online, please contact Ina Hoffmann, editorial assistant, in the editorial office by e-mail [ed@MethodsInfMed.org](mailto:ed@MethodsInfMed.org).

All manuscript submissions will be processed via the online system. Decisions and correspondence with the editors and the editorial office will be communicated via e-mail.

### Review

Manuscripts may be forwarded to three experts, usually members of the journal's editorial board, for their opinion. They will be asked to comment on the significance of the work (including its scientific impact and importance to the field), quality of scientific and/or technical content, originality and innovativeness, reference to related literature, organization, and clarity of expression. A more detailed description of these quality criteria can be downloaded from [http://www.imiapubs.org/03\\_ImiaPubs\\_Instructions.html](http://www.imiapubs.org/03_ImiaPubs_Instructions.html). The final decision concerning acceptance or rejection of articles will be at the discretion of the editor-in-chief and the associate editors.

### Page Charges

The submission rate to *Methods* continues to be high, and yet the space available is limited. The first 5 pages in print of an article are free of charge (i.e., about 22,000 characters incl. space bars, please deduct 1500

char. including space bars for each figure or table). Authors who submit an article that exceeds 5 pages in print (including references, figures and tables), will be charged € 125.00 for each page exceeding the number of 5 pages, to be paid to the publisher before the article is published.

### Schattauer Copyright Permission Policy

Written permission is required to reproduce material from Schattauer GmbH publications in other publications, electronic products, or other media. To obtain a copyright permission please contact Carola Kalff: [carola.kalff@schattauer.de](mailto:carola.kalff@schattauer.de), fax: +49 711 2 29 87 75. You may fax or e-mail your request along with the full citation of the journal the paper appears in with volume number and page number(s) as well as what you are requesting to use the material for. Use of copyrighted material always requires proper citation.

### Personal/Non-commercial Use

No copyright permission request is necessary from original authors posting a pre-print (i.e., accepted by the publisher but not copy-edited) version of their article on their own web site or uploading it to institutional and/or centrally organized repositories. In this case the article must include the following statement: "This article is not an exact copy of the original published article in *Methods of Information in Medicine*. The definitive publisher-authenticated version of [insert complete citation information here] is available online at: [insert URL here]."

The original author is also allowed to include the article in a thesis or dissertation provided that this is not to be published commercially.

Posting and uploading of the copy-edited version is allowed only after a 12-month embargo period after the publishing date according to the Schattauer copyright permission policy.

### Proofs and Reprints

Galley proofs will be sent to the author to check for typesetting accuracy. No changes to the original typescript are accepted at this stage. Proofs with corrections should be returned within 48 hours of receipt. Reprints may be ordered at the prices shown on the publisher's order form that is sent together with the proofs.

### Electronic Support

The Instructions to Authors are also available at the journal's web site <http://www.methods-online.com>.

### Online Access

Once published, all articles appear online at <http://www.methods-online.com>.

### Journal Contact Information

Please use [ed@MethodsInfMed.org](mailto:ed@MethodsInfMed.org) as e-mail address for all correspondence with the editors and with the editorial office (University of Braunschweig – Institute of Technology and Hannover Medical School, Peter L. Reichertz Institute for Medical Informatics, Muehlenpfordstr. 23, 38106 Braunschweig, Germany, phone: +49 (0)5 31/3 91–95 00, fax: +49 (0)5 31/3 91–95 02, [www.plri.de](http://www.plri.de); editorial assistant is Ina Hoffmann, Dipl.-Inform. M.Sc.).
