

Supplementary Figure to Lima et al. “Malignant transformation in melanocytes is associated with increased production of procoagulant microvesicles” (Thromb Haemost 2011; 106.4)

Supplemental Figure 1: PS exposure on Tm1 and melan-a MVs as analyzed by labeling with 3G4 mAb or annexin-V. Flow-cytometric analysis of PS exposure on Tm1 and melan-a MVs. Gray regions represent unstained MVs in each histogram; black lines represent staining with Alexa 488-conjugated anti-PS mAb or FITC-conjugated annexin-V.
