## Stabilization of coxo-femoral luxation using tenodesis of the deep gluteal muscle

### Technique description and relaxation rate in 65 dogs and cats (1995–2008)

P. Rochereau; A. Bernardé

Vet Comp Orthop Traumatol 2012; 25:  
doi:10.3415/VCOT-10-12-0168

**Appendix Table 1:** Lameness score, range-of-motion (ROM), and pain score (0 = absence of pain; 1 = pain at manipulation of the hip) of the 26 dogs and 8 cats at two months postoperatively. N = number.

| N  | Breed                    | Age (years) | Body weight (kg) | Lateralization | Follow-up (weeks) | Lameness score at follow-up | ROM | Pain score |
|----|--------------------------|-------------|------------------|----------------|-------------------|-----------------------------|-----|------------|
| 1  | Domestic Shorthaired cat | 3           | 5.5              | Right          | 11                | 0                           | 0   | 0          |
| 2  | Domestic Shorthaired cat | 12.5        | 3.5              | Right          | 8.5               | 0                           | 0   | 0          |
| 3  | Domestic Shorthaired cat | 1           | 4                | Left           | 10                | 0                           | 0   | 0          |
| 4  | Domestic Shorthaired cat | 6           | 6                | Right          | 12.5              | 0                           | 0   | 0          |
| 5  | Domestic Shorthaired cat | 5.5         | 4.5              | Left           | 9.5               | 0                           | 0   | 0          |
